- Cumulative **GPA:** 9.30

PROJECTS

A Secure Multi – Hop Routing for IOT Communication

Multi-hop routing protocol that enables secured IoT devices communicate with each other over a wireless network in a secure and efficient manner. Multi-hop routing involves relaying data through multiple devices to reach its destination, which can improve network coverage and reliability.

A Deep Learning Approach for IOT Traffic in a Smart City

A system that controls traffic signals in X and Y junction automatically. It collect images from the user to clear signals for the lanes which has highest count of vehicles.

CERTIFICATIONS
